EDUCATION

Guru Nanak Institute of Technology (MAKAUT) B.Tech in Computer Science and Engineering (CGPA: 7.76)	2022 – 2026
International Public School XII (ISC), Percentage: 80%	2022
St. Joseph and Mary's School X (ICSE), Percentage: 88%	2020

TECHNICAL SKILLS

- **Languages:** Java (OOP), TypeScript, JavaScript, Python, SQL
- **Frontend/Mobile:** Flutter, React, Next.js, Tailwind CSS
- **Backend:** Node.js, Express.js, BullMQ, Redis, PostgreSQL, REST APIs
- **Infrastructure & Tools:** Docker, Git/GitHub, VS Code, Android Studio, Vercel, Render, Cloudflare Pages, Neon
- **Concepts:** OOP, DBMS, SDLC, System Design Basics
- **Soft Skills:** Problem Solving, Communication, Adaptability
- **AI-Native Development:** Claude (Claude Code, claude.ai) & Cursor — primary tools for architecture design, code generation, and iterative debugging; worked with OpenAI API and local LLMs (OpenCode) for experimentation and LLM-powered feature prototyping; experienced critically evaluating and overriding AI output when it conflicts with performance or correctness constraints

WORK EXPERIENCE

Happy to Learn Autism Preview — <i>Full-Stack Web Developer (Internship)</i>	Mar 2026 – Present
<i>Tech: Next.js 15, React 19, TypeScript, Tailwind CSS v4, Cloudflare Pages, JSON-LD, IntersectionObserver API</i>	
• Architecting and building a complete Next.js 15 + React 19 web application (8 App-Router routes, static export) to replace the client's legacy WordPress site — pre-rendered HTML edge-delivered via Cloudflare Pages with a ~108 KB shared JS budget. • Implemented technical SEO end-to-end: LocalBusiness JSON-LD with geo-coordinates, opening hours, and aggregate rating; force-static sitemap and robots; per-route canonical, Open Graph, and Twitter Card metadata targeting high-value Kolkata healthcare keywords. • Engineered a zero-library animation system using Claude Code to accelerate development — route-aware IntersectionObserver reveal hook, rAF-based useCountUp with cubic ease-out, and a 60 fps transform-based mobile drawer; iterated on AI-generated drafts and rewrote core logic for correctness under strict JS budget constraints. • Designed the brand design system (CSS custom properties + Tailwind v4) and built 8 reusable section primitives (Accordion, Tabs, PageHero, BoldCardGrid); leveraged AI-assisted workflow to accelerate component scaffolding while retaining full ownership of design decisions and form logic.	

PROFESSIONAL PROJECTS & FREELANCE EXPERIENCE

EmailJobScheduler GitHub Demo Video — <i>Distributed Email Scheduling System</i>	Mar 2026 – Apr 2026
<i>Tech: Express.js, TypeScript, BullMQ, Redis, PostgreSQL, Prisma ORM, Next.js, Docker Compose, Google OAuth</i>	
• Built a distributed email scheduling system handling delayed and batched job processing across Redis-backed queues (BullMQ), with per-sender rate limiting and exponential backoff retry — sustained 1,000+ scheduled deliveries per batch with zero duplicates verified across forced-restart tests. • Designed crash-recovery using Redis AOF persistence and PostgreSQL-backed job state so jobs survive worker restarts and resume from last-known status — eliminating duplicate sends through pre-dispatch idempotency checks. • Engineered a Redis TTL-based rate limiter that re-queues throttled jobs to the next hourly window instead of dropping them, ensuring 100% delivery completion under enforced rate caps where a naive implementation would silently lose mail. • Applied Claude-assisted system design to architect the BullMQ queue topology and Redis TTL rate-limiter logic — validated all design decisions independently against Redis documentation and load-test results before	

finalising the implementation.

CareTech Health Solutions | [Live Demo](#) — *Healthcare Services (Freelance)* **Feb 2026 – Present**
Tech: Next.js 16, React 19, TypeScript, Tailwind CSS v4, Framer Motion, EmailJS, Cloudflare Pages, Cloudflare Analytics

- Designed and deployed a production healthcare platform for a real client covering **8 service verticals** and 20+ medical products with dual rent/buy mode switching, tiered physiotherapy pricing, and dynamic App Router routing.
- Built a full **appointment booking system** via EmailJS with real-time form validation, pre-filled service context across pages, and automated email delivery to care coordinators.
- Implemented **technical SEO end-to-end**: JSON-LD MedicalBusiness structured data, dynamic XML sitemap, Open Graph tags, and 4 local-search-optimised pages; achieved Google indexing post-launch.
- Deployed on **Cloudflare Pages** with automatic CI/CD from GitHub and intelligent caching (1-hour content TTL + 1-year immutable for static assets) achieving high Lighthouse scores.

The Stage Time | [Live Demo](#) — *Event Discovery & RSVP Platform (Freelance)* **Sept 2025 – Present**
Tech: React, TypeScript, Vite, Tailwind CSS, shadcn/ui, Supabase, Firebase, Capacitor

- **Built end-to-end using an AI-native workflow with Claude** (Claude Code + claude.ai) — used Claude as the primary co-engineer for architecture decisions, component scaffolding, and debugging across the full stack (React + Supabase + Firebase + Capacitor), accelerating delivery speed 3–4× while retaining full ownership of logic and correctness.
- Engineered all core features single-handedly: a smart “Similar Events” recommendation engine, real-time RSVPs, Google OAuth, and deep linking — leveraging Claude for boilerplate generation and using own judgment to override AI output wherever it conflicted with runtime behaviour or performance constraints.
- Applied **Claude-guided debugging** to resolve cross-device stability issues including pixel ratio capping, conditional animation loading, and responsive asset handling — every AI suggestion cross-validated against device profiles before acceptance.
- Owned the complete SDLC solo — scoping, development, QA, and iterative client releases — using structured Git workflows; Claude served as an always-available senior reviewer, cutting review loop time dramatically despite no dedicated QA or design support.

Personal Portfolio | [Live Demo](#) — *Interactive 3D Portfolio Website* **Dec 2025 – Mar 2026**
Tech: Next.js 16, React 19, TypeScript, Tailwind CSS v4, Three.js, GSAP, Framer Motion, Lenis, Radix UI

- **Architected and shipped end-to-end using Claude as the primary AI co-engineer** — used Claude Code for scaffolding complex Three.js pipelines, GSAP animation sequences, and Canvas 2D particle systems; retained full authorship of all design decisions and performance trade-offs throughout.
- Leveraged Claude iteratively to debug GPU-accelerated particle systems (Three.js Fibonacci sphere), WebGL rendering pipelines, and Lenis scroll orchestration — cross-validating every AI suggestion against browser performance profiles before accepting.
- Developed a real-time 3D tech globe using Three.js with Fibonacci sphere distribution, GPU-accelerated particles, and dynamically projected React icons in 3D space.
- Designed and implemented production-grade animations using GSAP, Framer Motion, and Lenis — parallax systems, 3D tilt interactions, and text-scramble effects; built a scalable Tailwind CSS v4 design system with CSS variables and Radix UI for accessibility-first components.

NoCap Papers | [Live Demo](#) — *Gen-Z Exam Paper Web App (Freelance)* **Sept 2025 – Dec 2025**
Tech: React, TypeScript, Vite, Tailwind CSS, Lucide React

- Architected a high-performance web app for managing academic resources with a custom PDF viewer (zoom, pan, dark mode, bookmarking) and efficient state management.
- Designed all UI layouts and visual decisions through Vibe Designing — translating rough product ideas into a structured, Gen-Z-native interface without a dedicated designer or formal design handoff.

ACADEMIC PROJECTS

Movie Booking App — *Flutter, Firebase, Stripe API* **2024**

- Integrated Stripe payments with responsive UI and handled edge cases for payment validation.

CERTIFICATIONS & INTERESTS

- **Google Cloud Computing:** Foundations Level 3 – Generative AI (2023)
- **Data Structures:** UC San Diego (Coursera, 2023)
- **Interests:** Generative AI, Prompt Engineering, Agentic AI, AI Automation, AI-native workflow
